2. (C) Lessons Learned, Commander's Observations, Evaluation and Recommendations:

a. Personnel: None

b. Intelligence: None

c. Operations:

(1) Air-Lifting the M114A1 155mm howitzer

(a) OBSERVATION: When air lifting the M114A1 howitzer with a CH54 the air lift straps apply extreme pressure to the left and right shields of the howitzer, causing them to crack. This necessitates removing the howitzer from the firing pit to perform the required welding and maintenance.

CONFIDENTIAL

AVGE-ZC

8 May 1970

SUBJECT: Operational Report-Lessons Learned 5th Battalion 42d Artillery,
Period Ending 30 April 1970, RCS CSFOR-65 (R2)

(b) EVALUATION: Removal of the left and right shield prior to air lifting the howitzer will prevent the shield from being cracked by the pressure applied to shield while howitzer is being lifted.

(c) RECOMMENDATION: That units employing the (M114A1) 155mm howitzer, remove the left and right shields prior to air lifting with a CH54 helicopter.

(2) Rapid Occupation of position with M114A1 towed 155mm Howitzer.

(a) OBSERVATION: During occupation of position with a M114A1 towed 155mm Howitzer the howitzer must be jacked up before emplacing the pedestal for shifting trails. This procedure requires the men to jack the howitzer once prior to being layed. The same requirement can be met by using 3 men per trail lifting the trails high enough to permit emplacement of the pedestal.

(b) EVALUATION: The time and effort expended can be greatly reduced by lifting the trails to emplace the pedestal.

(c) RECOMMENDATIONS: Units employing the M114A1 towed 155mm howitzer lift trails to emplace pedestal, rather than using the jack.

(3) Resupply of ammunition at remote fire support bases:

(a) OBSERVATION: When airlifting ammunition to a M114A1 towed 155mm howitzer battery located at a remote fire support base, transportation of the ammunition from the resupply pad to the howitzer section pit is difficult when using the limited number of vehicles present. The ammunition must be loaded on the vehicle and off-loaded at the section pit by hand. Use of (M 332) 1½ ton ammo trailers loaded with 32 complete rounds and air lifted by a CH47 helicopter has proven more satisfactory. After the trailer has been air lifted to the resupply pad a 3/4 or 2½ ton truck can haul it immediately to the howitzer section.

(b) EVALUATION: The time and effort expended during ammunition resupply can be reduced by using the 1½ ton ammo trailers (M 332).

(c) RECOMMENDATIONS: Units employing the M114A1 towed 155mm howitzer use the (M 332) 1½ ton ammunition trailer for resupply at remote fire support bases.

TO: Commanding General, II Field Force Vietnam, ATTN: AVFEC-RG, APO 96266

This headquarters has reviewed the quarterly report of the 5th Battalion, 42d Artillery and concurs in operations and lessons learned as reported with the following exceptions:

a. Para 2c(2) Occupation of position with M114A1 towed 155mm howitzer. The procedures outlined are faster than the standard procedure however, they should be used only when the terrain or firing pad is level and where air brakes are in good working order. Otherwise, loss of control of the weapon by the men raising the trails and possible injury to personnel or damage to the weapon could occur.

b. Para 2c(3) Resupply of ammunition at remote fire support bases.

(1) The observation and evaluation presented are valid; however, the limited availability of air assets precludes complete utilization of trailers.

(2) The use of trailers should be limited to initial occupation of position, and at a ratio of one trailer to two howitzer positions. This minimizes the loss of effective lift capacity and still provides the mobility needed for rapid occupation of position.
